Installation Guide

How to put Search Pro V4 in a 3DVista tour and make it yours.

What You Need

Four things, all of them ordinary tools.

- Your 3DVista tour, published from the 3DVista desktop program (the folder that holds `index.html`)
- A code editor to open `index.html`, such as Notepad, VS Code or Sublime Text (TextEdit works when it is set to plain text)
- The `search-pro-v4` folder from the zip file you received
- A way to put files on your website: an FTP program or the file manager of your hosting

Put the Folder in Your Tour

The search lives in one folder. It must be at the same level as your tour files, in the same folder as your tour's `index.html`.

1 Unzip the file

Unzip the file you received. Inside is the folder `search-pro-v4/` with every part of the plugin.

2 Keep a spare copy

Copy the folder to a safe place before you change anything. If something goes wrong you can start again from it.

3 Put it in your tour folder

Put the `search-pro-v4/` folder in your tour folder, at the same level as the `index.html` file: both sit side by side in the same folder.

⚠ Do not rename the folder. The search, the Control Panel and its Live Preview all look for the exact name `search-pro-v4`.

WHAT YOUR TOUR FOLDER LOOKS LIKE

```
your-tour/
```

- **index.html** The page 3DVista publishes. You add two lines to it.
- **script.js, lib/, media/ …** The files 3DVista publishes. Never edit these.
- **search-pro-v4/** The search. Put it here.
  - **search-v4.js** The search engine
  - **css/** Holds search-v4.css, the look of the search
  - **config/** Your settings file goes here (search-pro-config.js)
  - **assets/** The default pictures of the results
  - **fuse.js/** The word-matching library (dist/fuse.min.js)
  - **icons/** Icon fonts for custom result icons
  - **business-data/** Your CSV file, if you use one
  - **extras/** Button.js, the code for the 3DVista button
  - **dashboard/** The Control Panel

Add the Search Button

The search opens when a visitor presses a button. You make that button once, in 3DVista.

1 Copy the button code

Open `search-pro-v4/extras/Button.js` in your editor and copy everything in it, or use the Copy button below.

Button action (JavaScript)

```
try {
    var searchContainer = document.getElementById('searchContainer');
    if (searchContainer) {
        if (!window.searchListInitiinitialized) {
            window.tourSearchFunctions.initializeSearch(this);
        }

window.tourSearchFunctions.toggleSearch(searchContainer.style.display
!== 'block');
    }
} catch (error) {
    console.error('Button action error - Check if initialization is
```

```
complete:', error);
}
```

2 Add a button

In 3DVista open your tour, go to the **Skin** tab and add an **Icon Button**. Choose an icon and place it where you want it.

3 Give it its action

In the Actions panel choose **Execute JavaScript (JS)**, paste the code and click **Done**. Do not change the code.

4 Preview and publish

Click **Preview** to save, then **Publish (Web/Mobile)** to write your tour files.

⚠ Keep the code exactly as it is. The search looks for the names inside it.

Add Two Lines to index.html

Two lines tell the tour to load the search. The order of the lines matters.

1 Open the tour `index.html` file

Open the `index.html` file of your tour in a code editor.

2 Find the viewer line

Look for the line `<div id="viewer" class="fill-viewport"></div>`, near the end of the file.

3 Paste the two lines

Paste the two lines below right after it, and before `</body>`. The search engine comes first and the settings file second. This is the order we tested and recommend.

index.html

```
<script src="search-pro-v4/search-v4.js"></script>
<script src="search-pro-v4/config/search-pro-config.js"></script>
```

4 Save the file

Save `index.html` and upload it with your tour.

THE END OF YOUR INDEX.HTML THEN LOOKS LIKE THIS

index.html

```
<div id="viewer" class="fill-viewport"></div>
<script src="search-pro-v4/search-v4.js"></script>
<script src="search-pro-v4/config/search-pro-config.js"></script>
</body>
```

No settings file yet? Add only the first line for now. Add the second line when you have downloaded your settings file (see Save and Publish Your Settings).

Publishing again from 3DVista writes a new `index.html`. After every publish, add the two lines again.

If your tour has a loading screen, leave its block where it is: only add the two lines after the viewer line.

Do not replace the whole page. Only add the two lines. Never edit the other files 3DVista publishes.

Upload to Your Server

Put the tour and the search folder on your website. Not every file in the folder is needed there.

WHAT TO UPLOAD

FILE OR FOLDER	WHAT IT IS	NEEDED?
`search-v4.js`	The search engine	Required
`css/search-v4.css`	The look of the search	Required

FILE OR FOLDER	WHAT IT IS	NEEDED?
`fuse.js/dist/fuse.min.js`	The word-matching library. Only this one file of the folder is needed.	Required
`config/search-pro-config.js`	Your settings file, the one you download from the Control Panel	Required
`assets/`	The default pictures of the results (20 files)	Required when pictures are on
`icons/`	Icon fonts. Without them a tour asks another website for an icon font it needs.	Recommended
`business-data/`	Your CSV file, only when Data Sources reads a CSV file	If you use it
`dashboard/`	The Control Panel, with its fonts/, preview/ (the Live Preview), css/, js/, tabs/ and fontawesome/ folders. Upload all of it, or none.	If you use it
`extras/`	The button code. Keep it on your computer.	Not needed

ⓘ The Control Panel needs the engine files too. Its Live Preview runs the real search, so if you upload `dashboard/` also upload everything marked Required and Recommended.

⚠ File permissions: 644 for files and 755 for folders is usual. The server must be allowed to read every file.

WHAT YOUR SERVER LOOKS LIKE

YOUR WEBSITE

- your-tour/
  - **index.html** Tour entry point, with your two added lines
  - search-pro-v4/
    - **search-v4.js**
    - css/

```
search-v4.css
fuse.js/
  dist/
    fuse.min.js
config/
  search-pro-config.js  Your settings
assets/
icons/
business-data/  Only with a CSV file
dashboard/  The Control Panel (see Secure Your Control Panel)
```

Open the Control Panel

The Control Panel is where you change every setting and see the result at once.

1 Check the upload

On the server, the folder `search-pro-v4/` must be at the same level as your tour files, in the same folder as your tour's `index.html`, with its `dashboard/` folder inside.

2 Open the address

In your browser open `https://your-domain.com/your-tour/search-pro-v4/dashboard/control-panel-v4.html` (use your own domain and tour folder). Open it through the web address. Double-clicking the file on your computer does not work.

3 Keep two tabs open

Keep your tour in one browser tab and the Control Panel in another, in the same browser and at the same web address. A change then shows in the open tour at once, before you save anything.

A 404 error almost always means a typo in the address or the folder in the wrong place.

WHAT YOU SEE

The sidebar lists the tabs: General, Appearance, Display, Content, Filtering, Data Sources, Animations, Advanced and Knowledge. Under the open tab it lists the cards of that tab.

Search settings (top bar, or press `Ctrl` or `Cmd` + `K`) finds a setting by a word and jumps to it.

Live Preview (the Preview button) shows the real search on a sample tour next to your settings, as it looks on a computer or a phone.

The page remembers where you were. When you reload the Control Panel it opens on the same tab and card.

BUTTON	WHAT IT DOES	WHO SEES IT
Apply Settings	Keeps your settings in this browser. A tour you open here later uses them.	Only you
Download	Saves your settings as the file `search-pro-config.js`.	Nobody yet
Load	Reads a settings file you saved earlier back into the Control Panel. Use a file you downloaded from this Control Panel.	Only you
Reset	Puts every setting back to its default in this browser. The file on your server stays as it is.	Only you

Visitors only see your settings after you download the file and upload it to your server. Closing the Control Panel does not lose your changes: when you open it again, it asks whether to bring them back. The exceptions are a reset and clearing your browser's data or cache, which remove them.

Every setting has its own entry in the Settings Reference, with what it does, its choices and its default.

Save and Publish Your Settings

Make your settings permanent and visible to every visitor.

DOWNLOAD AND UPLOAD

1. **Download the file from the Dashboard**

   Open the Control Panel (the page in the `dashboard/` folder) and press **Download** in its top bar. Your browser saves `search-pro-config.js`.

2 **Upload it**

With your FTP program or the file manager of your hosting, put it in `search-pro-v4/config/` and replace the old one.

3 **Reload without the cache**

Open your tour and press `Cmd` + `Shift` + `R` on a Mac or `Ctrl` + `F5` on Windows. A browser keeps old files for a while and would show the old settings.

⚠ Do not edit the `search-pro-config.js` settings file by hand and do not delete lines. Change settings in the Control Panel and download the file again.

KEEP EDITING LATER

1 **Load your file**

Open the Control Panel and press **Load**. Choose the `search-pro-config.js` you saved. Every tab then shows your settings again.

2 **Change and download again**

Change what you want, press **Download** and upload the new file.

Data Sources: Google Sheet or CSV

Optional. Give results their own names, descriptions, pictures and tags from a table you keep. The tour itself is never changed.

PREPARE THE TABLE

Row 1 holds the column titles: `id`, `tag`, `name`, `description`, `imageUrl`, `tags`, `elementType`, `parentId`.

Each following row describes one item of the tour. The `id` is the item's title in 3DVista, written exactly (capital letters do not matter). An empty cell keeps the tour's own value.

The Data Sources tab has a **Download an example CSV** button.

CONNECT IT

1 **Choose the source**

Open the Data Sources tab and choose **Google Sheets** or **CSV file**. Only one is active at a time.

2 **Google Sheet**

Share the sheet as **Anyone with the link: Viewer**, paste the link into the Control Panel.

3 **CSV file**

Put your file in `search-pro-v4/business-data/` and write its path in the Control Panel. Upload the CSV file to your server too: it is a second file next to your settings file.

4 **Press Test this source**

The test says how many rows were read, which rows found their place in the tour and which did not, and why.

5 **Download and upload your settings**

The link or path is part of the settings file, so download it again and upload it as above.

⚠ Visitors find an item by the name, description and tags from your table, and still by the tour's own name. If the table cannot be read, visitors get the normal search with the tour's own names.

⚠ **Keep a Copy** (Data Sources tab) lets a visitor's browser keep a Google Sheet for a number of minutes, so changes in the sheet appear after that time. It is not used for CSV files.

Pictures in the Results

Optional but recommended. Each kind of result can show a picture of your tour or a default picture.

WHERE TO SWITCH THEM ON

Open the Display tab and turn on **Show Pictures in Results**. Under **Element Types** choose, for each kind, whether its results show a picture, an icon or both, and the size of the picture.

The **Placeholder File** of a kind is the picture shown when an item has none of its own.

THE DEFAULT PICTURES

FILE IN ASSETS/	USED FOR
`default-thumbnail.jpg`	Panorama, Other (everything else)

FILE IN ASSETS/	USED FOR
`360-video-default.jpg`	360 Video
`flat-video-default.jpg`	Flat Video
`photo-album-default.jpg`	Photo Album
`map-default.jpg`	Map
`audio-default.jpg`	Audio
`pdf-default.jpg`	PDF
`hotspot-default.jpg`	Hotspot
`polygon-default.jpg`	Polygon
`video-default.jpg`	Video
`webframe-default.jpg`	Webframe
`image-default.jpg`	Image
`text-default.jpg`	Text
`projected-image-default.jpg`	Projected Image
`element-default.jpg`	Element
`container-default.jpg`	Container
`3d-model-default.jpg`	3D Model
`3d-hotspot-default.jpg`	3D Hotspot
`3d-model-object-default.jpg`	3D Model Object

Also in `assets/` : `panorama-default.jpg`. It is not used by default; type the file name in the Placeholder File of a kind to use it.

Supported: .jpg, .jpeg, .png, .gif, .webp, .svg. The 20 pictures that come with the plugin are 1920 × 1080 pixels (16:9). Use the same shape for yours.

- Put every picture in `search-pro-v4/assets/`
- The file name must match exactly the name in the Display tab
- Capital letters matter in the file name, because file names are case sensitive: `hotspot-default.jpg` is not `Hotspot-Default.jpg`

IF A PICTURE DOES NOT SHOW

Check the file name and its ending (`.jpeg` is not `.jpg`). Open the picture directly: `https://your-domain.com/your-tour/search-pro-v4/assets/yourfile.jpg` .

An old picture still showing: reload without the cache, or clear the cache of your hosting or CDN for that file.

Hide or Show Only Some Results

The Filtering tab decides which results visitors never see.

- **By name:** choose Hide These or Show Only These and list the names. A name matches when it contains the words you list.
- **By tag:** the same, with the tags you gave in 3DVista. With Show Only, an item without tags is left out, panoramas and containers too.
- **Panoramas by Number:** the same, with numbers, one per line. A number is the place of a panorama, video or 3D model in the Main Playlist of your tour, counted from 1. Containers are not affected.

Filtering compares the names and tags of the tour, not the ones from a Data Sources table.

- Not finding a result you expect? Check which kinds are switched on in **Content** and what **Filtering** hides. **Scan the Open Tour** in the Advanced tab shows what the search can see in your tour.
- Too much information showing? Review the other settings too, such as the kinds switched on in **Content**, to make filtering more accurate.

Keep the Search Bar on Screen

Optional. Show the Search Bar from the start and keep it there, on computers, on phones or on both.

The **Search Bar** is the box visitors type in. The **Search Results** are the list under it. By default the whole search, bar and results, goes away when a visitor chooses a result, clicks or taps outside it,

or presses Escape. With the settings below the Search Bar is there when the tour starts and stays on screen. Only the Search Results go away.

1. **Open the General tab**
   In the Control Panel open **General** and find the section **Opening and Closing**.

2. **Show the Search Bar from the start**
   Switch on **Open When the Tour Starts** for **Desktop**, **Phone** or both.

3. **Keep it on screen**
   Leave the three **Hide the Search Results** settings on, and switch off the three **Also Hide the Search Bar** settings (After Choosing a Result, When Clicking or Tapping Outside, With the Escape Key) for the same device types.

4. **Download and upload your settings**
   See Save and Publish Your Settings.

WHAT VISITORS SEE

- A click or tap outside hides only the Search Results and empties the field. The Search Bar stays.
- Escape clears the text and hides the Search Results. While the field is empty, Escape is left to your tour.
- Choosing a result hides the Search Results and clears the text. The Search Bar stays.
- Typing again shows the Search Results again. Ctrl or Cmd + K puts the cursor in the field.
- The search button of your tour, if you added one, still opens and closes the whole search.

ⓘ A Search Bar that stays does not need the 3DVista button. Add the button only if visitors should be able to hide the Search Bar.

⚠ On a phone the Search Bar takes room from the tour. Check how it looks on your own phone before you publish.

Coming From Version 3

Your button stays, your settings come with you. The folder and the two lines in `index.html` change.

> ⚠ Replace the old search, do not add a second one. A tour must load only one search, so the two Version 3 lines go away when the Version 4 lines go in.

1 Keep your settings file

Copy `search-pro-v3/config/search-pro-config.js` to your computer. You will load it into the new Control Panel.

2 Put the new folder next to the old one

Place `search-pro-v4/` at the same level as your tour files, in the same folder as `index.html` (see Put the Folder in Your Tour). Leave `search-pro-v3/` where it is for now.

3 Switch the two lines in index.html

Take out the two Version 3 lines and paste the two Version 4 lines in their place, in the same order.

index.html - take these two out

```
<script src="search-pro-v3/search-v3.js"></script>
<script src="search-pro-v3/config/search-pro-config.js"></script>
```

index.html - put these two in

```
<script src="search-pro-v4/search-v4.js"></script>
<script src="search-pro-v4/config/search-pro-config.js"></script>
```

4 Keep your button

The button code is the same in both versions, so the button in 3DVista needs no change. Do not add it again.

5 Bring your settings over

Open the new Control Panel (`search-pro-v4/dashboard/control-panel-v4.html`), press **Load** and choose your Version 3 file. Settings that exist in both versions come across. Look through the tabs, then press **Download**: the new file also holds the settings Version 4 added.

6 Upload and reload

Upload the `search-pro-v4/` files (see Upload to Your Server), the new settings file in `search-pro-v4/config/` and your changed `index.html`. Reload your tour without the cache.

7 Remove the old folder

When the tour works as you expect, remove `search-pro-v3/` from your server or local directory.

GOOD TO KNOW

- Version 4 can also read a Version 3 settings file as it is, so nothing breaks if the old file is still in place when you switch. Loading it and downloading it again is how you get a Version 4 file.
- The address of the Control Panel changes: it is now `search-pro-v4/dashboard/control-panel-v4.html`.

Update to a New Version

Your settings file stays. Only the plugin files change.

1 Keep your settings file

Make a copy of `search-pro-v4/config/search-pro-config.js` on your computer.

2 Upload the new files

Upload the files of the new `search-pro-v4` folder over the old ones, and replace the files that exist. Do not delete the `config/` folder: your settings file lives there.

3 Reload without the cache

Open your tour and press `Cmd` + `Shift` + `R` or `Ctrl` + `F5`, so the browser does not keep the old engine.

4 Look through the Control Panel

Open the Control Panel, press **Load** with your settings file, look through the tabs and press **Download** again, so the file includes the settings the new version added. Upload that file to `config/`.

- Your two lines in `index.html` and the button in 3DVista stay the same. Nothing needs to change there.

Help and Troubleshooting

Common problems, quick fixes and how to get help.

COMMON PROBLEMS

PROBLEM	WHAT TO CHECK
The settings do not show in the tour	Apply Settings only changes your own browser. Download the file, upload it to `search-pro-v4/config/` and reload without the cache. In `index.html` check that the engine line comes first and the settings line second.
The search button does nothing	Check that the button has the JavaScript action and that `search-pro-v4/search-v4.js` loads. Open the browser console (`F12`) and look for a red message.
A file is not loading	Check the spelling and place of the file. In the browser console look for 404 (not found) or 403 (not allowed) messages.
The Search Bar disappears when visitors click on the tour	That is the default: a click outside hides the Search Results and the Search Bar. To keep the Search Bar on screen, switch off **Also Hide the Search Bar When Clicking or Tapping Outside** in General (see Keep the Search Bar on Screen).
A 403 (not allowed) message	Check the file permissions: 644 for files and 755 for folders is usual. The server must be allowed to read every file.
Choosing a result does not show the floor plan, album or video	Your tour keeps them in a window that is hidden. Turn on **Open Hidden Windows and Containers** in General.
My changes do not reach the open tour	Open the Control Panel and the tour in the same browser and at the same web address. A tour on another web address, or on a server, only gets your changes from the settings file: press **Download**, upload the file to `search-pro-v4/config/` of the tour and reload the tour without the cache (see Save and Publish Your Settings).

PROBLEM	WHAT TO CHECK
My settings are gone after closing the Control Panel	When you open it again it asks whether to bring them back. After a reset, or after clearing your browser's data or cache, they cannot be brought back: press **Load** and choose the file you downloaded. Only the downloaded file is kept for good.

THE 5-STEP 60-SECOND CHECK

1. Can you open the Control Panel address?
2. Does a change in the Control Panel show in the open tour without a reload?
3. Did you download the settings file and upload it to `search-pro-v4/config/`?
4. Did you reload the tour without the cache?
5. Does the tour show your settings now?

SECURE YOUR CONTROL PANEL

Anyone who finds the address of your Control Panel can open it. It cannot change your live tour without the settings file being uploaded, but protect it anyway once your settings are final.

1 **Option 1: delete it (recommended)**

Remove the `search-pro-v4/dashboard/` folder from your server once your final settings file is uploaded. The search keeps working with only `search-pro-config.js`. You can upload the folder again whenever you want to make changes.

2 **Option 2: password protect it**

Use the password protection of your hosting (for Apache, a `.htaccess` file) on the `search-pro-v4/dashboard/` folder.

CLEAN UNINSTALL

1 **Take the button out**

Remove the JavaScript action from the 3DVista button (or delete the button) and publish again.

2 **Take the two lines out**

Remove these two lines from `index.html`:

index.html

```
<script src="search-pro-v4/search-v4.js"></script>
```

```
<script src="search-pro-v4/config/search-pro-config.js"></script>
```

3 **Remove the folder**

Remove the `search-pro-v4/` folder from your server.

GET HELP

The contact details for support are provided after your purchase is completed, in the contact file that comes with it.

Feedback: a positive review helps other 3DVista users discover this plugin and lets us spend more time on future improvements.
