Third-Party Components

The open-source parts that ship inside Search Pro V4, with their licenses, and the only requests the search can make to other websites.

Version 4.0

Components

The open-source parts that ship inside Search Pro V4, with their licenses.

Search Pro V4 uses the components below. Each one keeps its own license. The license texts are in the folders named in the table, and the notices in the files themselves stay as they are: please do not remove them.

COMPONENT	LICENSE	WHERE IT IS	WHAT IT DOES HERE
Fuse.js	Apache License 2.0. The text is in the file LICENSE of that folder.	`fuse.js/`	Finds results while a visitor types, also when a word is spelled a little differently.
Font Awesome Free	Icons: CC BY 4.0. Fonts: SIL Open Font License 1.1. Code: MIT. The notice is at the top of its style sheet.	`icons/fontawesome/` and `dashboard/fontawesome/`	Icons for results when you choose them, and the icons of the Control Panel.
Bootstrap Icons	MIT. The text is in the file LICENSE of that folder.	`icons/bootstrap-icons/`	An icon set you can choose for results.
Ionicons (font version)	MIT. The text is in the file LICENSE of that folder.	`icons/ionicons/`	An icon set you can choose for results.
Geist and Geist Mono	SIL Open Font License 1.1. The text is in the file OFL-LICENSE.txt of those folders.	`dashboard/fonts/` and `documentation/fonts/`	The lettering of the Control Panel and of these pages.

The Terms and Conditions (section 7) point to this page as the list of third-party components and their licenses.

What the Search Asks Other Websites For

We do not collect or keep any information. These are the only requests the search can make to other websites, and each one has a condition.

✓ **We do not collect, receive or keep any information.** Search Pro V4 runs in the browser of the person using it. It has no analytics, no tracking, no cookies and no connection to any server of ours, so nothing about you, your tour or your visitors is ever sent to us and nothing is retained by us.

REQUEST	WHEN IT HAPPENS	GOES TO
A backup copy of Fuse.js	Only when `fuse.js/dist/fuse.min.js` cannot be loaded from your server	`cdn.jsdelivr.net`
A backup copy of an icon font	Only when a custom icon needs an icon font and its copy in the `icons/` folder cannot be loaded, or when an old settings file still has the older Font Awesome switch on	`cdnjs.cloudflare.com` or `cdn.jsdelivr.net`
Your Google Sheet	Only when you choose Google Sheets in the Data Sources tab	`docs.google.com`
Pictures and pages you add	Only the web addresses you type yourself, for example a picture address	The address you typed

These requests go to the websites named in the table, not to us. Each of those websites handles a request under its own terms and privacy policy, for example Google for a Google Sheet.

Some things stay in the browser of the person using them and are never sent to us: your unsaved settings in the Control Panel, and a copy of your Google Sheet when you use **Keep a Copy**.

The Control Panel and these pages load their own fonts and icons from their own folders.

ⓘ Each backup copy is checked against a fixed fingerprint before it is used. If your visitors' network blocks these websites, upload the whole `icons/` folder and `fuse.js/dist/fuse.min.js` and the search does not need them.
